

Genie Vision 4IP

Designed for Providing Remote Video Services

Genie Vision has a powerful processor that can connect up to four cameras for simultaneous transmission and viewing of video. The Genie Vision 4IP captures and transmits video over the Internet via your broadband connection. This security and business management tool combines event driven verification, video notification and look-in capability.

Features that Set the Genie Vision 4IP Apart

The Genie Vision 4IP transmits video using patented compression technologies to reduce video files sizes and transmission times. The Genie Vision 4IP is designed to connect to virtually any alarm trigger device. Standard components on the Genie Vision 4IP mean you can connect devices that you now use, such as CCTV cameras, video monitor, motion sensors, and door contacts.

Each input is connected to a specific alarm zone sensor that provides triggered video transmissions enabling video verification, open and close reports and event notification. Video clips can be emailed to designated end users of the system. Genie Vision will provide five seconds of pre-alarm and 25 seconds post-alarm video per event.

The installation of the Genie Vision 4IP is engineered to be installed in minutes. It requires no previous knowledge of the use of routers to be able to simply connect the Genie Vision 4IP to

the Internet. The Genie Vision 4IP connects directly to the router and cameras.

A Proactive Management Tool

Watch live video as well. The user can log into the Genie Vision 4IP to remotely view live video in a quad camera video format. The Genie Vision 4IP can be accessed in a straightforward, easy to use manner for live monitoring of the facility and staff. You can also generate virtual guard tours at scheduled times through our central station.

Easy to Use Human Interface

The Genie Vision 4IP comes with Web accessible dashboard that is designed for use by someone with little or no computer experience. The dashboard runs on Internet Explorer, allowing the user to establish the appropriate connection to the Genie Vision 4IP and begin use. The controls are intuitive. Searching for video was never easier and you will quickly find that the Genie Vision 4IP is designed to be used by anyone. You can record on motion only to see just the periods of activity at a given location, or record continuously during specific times of day. Naturally, you can go back and view previously recorded video and search based on time and dates. The Genie Vision 4IP is designed to meet the most important security needs of your business.

Features

- Plug and Play installation on IP networks
- Captures and transmits high-quality video over the Internet
- Wall mount and tabletop enclosure
- Records and stores on the Genie Vision Secure Network based on time table and events
- Transmits Pre and Post alarm recordings
- Supports login over the Internet for remote viewing
- Provides storage on the network in configurations supported by Guardian Protection Services
- 4 Video Motion Detection Sensors linked to alarm zones
- Full interface to alarm panels
- Secured and Encrypted communication

Genie Vision 4IP Specifications

Alarm Inputs

- 6 Alarm Trigger (Dry Contact) Inputs for Connection to Alarm Panel Zones or triggering device
- 1 Bell (power) input to be connected to bell out of the alarm panel

Communications

- LAN and WAN 10/1000 BaseT
- RS232 COM Port
- PSTN built in modem (optional) with line seizure

Local I/O

- VGA Monitor
- 2 Dry Contact Relay Outputs

Video Inputs

- 4 BNC Connectors for Video Inputs (NTSC or PAL)

Video Outlets

- 1 BNC Connector for Local Video Output (NTSC or PAL) Quad
